EDUCATION

Bachelor of Science, Electrical Engineering, BUITEMS
FSC, Pre-Engineering, Islamia Boys College

Aug 2020 – Nov 2024
April 2017 – Jun 2019

SKILLS

Languages & Libraries: Python, C++, NLTK, Pandas, Seaborn, SciKit-Learn, SpaCy, Keras, OpenCV

Frameworks & Tools: Flask, TensorFlow, MATLAB, YOLO, Pygame, Ollama LLM, LangChain, Pinecone

Machine Learning & AI: Recommendation Systems, K-Nearest Neighbors (KNN), Content Based Filtering, Seq2Seq, LSTM

EXPERIENCE

AI Engineer

Ultrasoft Systems

March 2026 – Present

Quetta, Balochistan

- ❖ As an AI Engineer, I build LLM and RAG chatbots using OpenAI, LangChain, and Pinecone, typically cutting response time on Q&A pipelines by 40 to 60%.
- ❖ I deploy computer vision models with PyTorch and OpenCV, often hitting 90 to 95% accuracy on production data.
- ❖ I shipped each project end-to-end, from scoping and fine-tuning through deployment on FastAPI or cloud endpoints, with iteration measured on accuracy, latency, and cost.

Data Visualization Associate (Intern)

Excelerate

April 2026 – May 2026

Remote

- ❖ Built a live compliance dashboard in Google Looker Studio for Saint Louis University's international student pipeline, flagging a 1,139-record High Risk cohort and an 18.2% overall compliance rate.
- ❖ Integrated Applicant, Connect, and SEVIS source data into PostgreSQL, deduplicating ~35,000 Connect rows down to 6,875 unique students; validated every dashboard metric against the source SQL with zero discrepancies.
- ❖ Named the program's Star Performer; awarded \$1,000.

PROJECTS

Real-Time Object Detection System with YOLOv8

June 2025 – Aug 2026

- ❖ Built an advanced real-time object detection system with Ultralytics YOLOv8, utilizing pre-trained COCO weights and custom dataset configuration to achieve high-accuracy bounding box predictions across multiple classes.
- ❖ Developed and tested the full end-to-end pipeline in Jupyter Notebook, including model training (evidenced by stored results), inference on test images, and visualization of detections, delivering efficient real-time performance at over 40 FPS on standard hardware while reaching mAP@0.5 levels competitive with benchmarks (~45–50% on validated sets).

Movie Recommendation System with Machine Learning

April 2025 – Sep 2025

- ❖ Developed a web-based recommendation system using Streamlit, delivering personalized movie suggestions based on user preferences via content-based, collaborative, and hybrid filtering approaches.
- ❖ Applied cosine similarity to TMDB 5000 dataset features for accurate movie matching and utilized Python libraries to process the Movie Lens dataset, demonstrating proficiency in data preprocessing and model evaluation.

SLAM Implementation in CARLA for Navigation in Dynamic Environments

Sep 2023 – Aug 2024

- ❖ Improved localization accuracy by 4% and runtime by 6% by fusing LiDAR, IMU, and GNSS data through a custom Python pipeline with ICP-based scan alignment.
- ❖ Strengthened map robustness with triangulation for landmark estimation and Kalman-filter fusion of IMU and LiDAR data, minimizing mapping errors.

CERTIFICATIONS

- ❖ IT Automation with Python
- ❖ AI for Everyone
- ❖ Machine Learning
- ❖ Mathematics for Machine Learning and Data Science

AWARD & HONORS

- ❖ **University Merit Scholarship** - Received annually from 2020 to 2024 for maintaining exceptional academic standing.
- ❖ **BEEF Scholarship** - Granted for outstanding academic performance and merit-based excellence from 2020 to 2022.
- ❖ **Prime Minister's National Laptop Scheme** - Recognized among top-performing university students nationwide, awarded a laptop for academic excellence.
- ❖ **PEC Final Year Design Project (FYDP) Funding** - Awarded by the Pakistan Engineering Council for addressing an industrial technical problem in the final year project, demonstrating innovation and practical application in engineering solutions.
